

# Colad Clean Pads

An innovative solution for a perfect finish and immediate savings!

# NEW

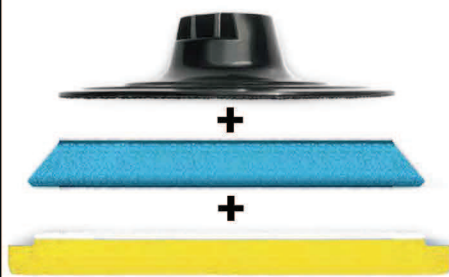

**Colad**  
an emm product

**Over 80% of the conventional, thick polishing pads are not properly cleaned after use and damage the coating when re-used!**

The 10mm thick Colad Clean Pad is much thinner than conventional 25mm pads. They can be washed from polishing residue for the full 100%! This enables you to start each job with a clean pad and prevents striping and holograms in your polished surface.

Together with the Interface Pad with rounded edges, the system has an overall thickness of 25 mm (10 mm Clean Pad + 15 mm Interface Pad) and is extra soft and flexible for a perfect finish!

## The Clean Pad System

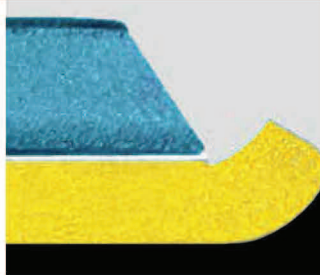

- 1** Tack up (Velcro) Pad  
Art.no. 010037
- 2** Interface Pad  
Art.no. 8840
- 3** Clean Pad ø150mm  
Hard - Medium - Soft

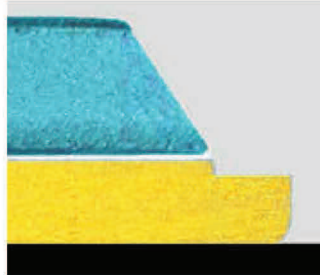

## Why Clean Pads?

- A 100% clean start of each job
- High durability
- Hologram-free performance
- Immediate savings & best results

## High Flexibility

Round surface

Flat surface

## The Clean Pad System in use

**1 POLISH**  
Add a new Clean Pad to the Interface Pad and you are ready to go!

**2 WASH**  
Wash the used Clean Pad in regular water till it is completely cleaned.

**3 NEW PROJECT**  
The washed and dried Clean Pad can be used during a new polishing job!
